

## **23rd July 2025 (Wednesday)**

Today's topic was User Interface Enhancement and Theming. The trainer discussed Material Design concepts, emphasizing colors, typography, and layouts. The first hour focused on revisiting `colors.xml` and `styles.xml` to create a consistent color scheme across all activities.

In the second hour, I modified message bubble shapes, updated toolbar colors, and applied uniform fonts throughout the application. I also added minor animations like smooth scrolling for new messages using RecyclerView's scroll-to-position method. The end result was a more visually cohesive and aesthetically pleasing chat interface.

The mentor appreciated my attention to design details and encouraged me to maintain this consistency in all future app development projects.
