

## **2nd August 2025 (Saturday)**

The session today focused on improving the user interface design of the project. During the first hour, our mentor emphasized the importance of a visually appealing and user-friendly layout for improving engagement and overall usability. I worked on refining the color palette, ensuring consistency across screens, and aligning buttons and text fields properly. I also learned about using XML attributes for better spacing, padding, and layout hierarchy in Android Studio.

In the second hour, I concentrated on enhancing text readability and icon design. I adjusted font sizes, added vector icons, and improved the visual arrangement of input fields. The trainer reviewed my work and gave feedback on minor improvements related to layout responsiveness for different screen sizes. By the end of the session, the app interface looked much more professional and aligned with modern design principles.
